ABSTRACT

The second section of a four-part technical report of Florida's statewide program for assessing reading-related skills in grades 2 and 4 provides statistical and scoring information. Item and student sampling, a test re-scoring study, reporting statewide assessment data (percentage of achievement, types of tables used), and standard error (comparing a district score with the State score) are discussed. Presented in appendices are: (1) 1971-72 high priority objectives for reading in Florida, ages 7 and 9; (2) statistical formulas; and (3) tables showing 68% confidence intervals for each objective for the districts and the State. (For related documents, see TM 002 724-725, 727.) (KM)

FILMED FROM BEST AVAILABLE COPY

Section 2, "Statistical Information," of the Technical Report was prepared by Dr. Gambhir M. Shrestha, Judy L. Haynes, and Dr. James C. Impara of the Evaluation Section, Bureau of Planning and Evaluation, Division of Elementary and Secondary Education, Department of Education. Requests for information or copies should be sent to the Evaluation Section, Department of Education, Tallahassee, Florida 32304.

This public document was promulgated at an annual cost of $2,318.88 or $1.65 per copy to inform interested parties of the 1972 Florida Statewide Assessment results and to provide information with which these results can be interpreted pursuant to Chapter 229.57(3)(c) Florida Statutes.

Section 2

STATISTICAL INFORMATION

Florida Department of Education

Division of Elementary and Secondary Education

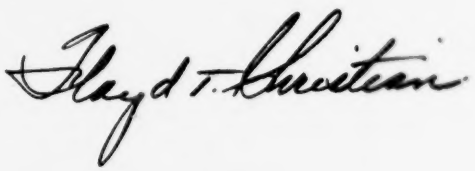
Bureau of Planning and Evaluation

FOREWORD

The Florida Department of Education is currently implementing a statewide assessment program which will provide in-depth information about the strengths and weaknesses of Florida's educational system. One of the most important features of this assessment program is its measurement of specific educational objectives which identify the skills Florida students should achieve from their educational experience.

The information about student achievement will enable educators to pinpoint weak spots and redistribute educational resources to achieve better results. The ultimate effect of this effort will be improvement in the degree to which our school system prepares students to function in society.

Developing an assessment program of this scope has been a monumental effort for the Department of Education. I am proud that the Department can present the procedures and results of this year's assessment program as a step toward improving the state educational system.



Floyd T. Christian
Commissioner

PREFACE

One provision of the Educational Accountability Act of 1971 was the establishment of a Statewide Assessment Program which would measure the degree of student achievement of statewide educational objectives. As the first step in implementing the assessment program, in 1971-72 a sample of second and fourth graders in each school in the State were tested on their achievement of selected reading-related skills. Approximately 53,000 students, or twenty percent of the students in each grade, were tested on the statewide objectives.

These objectives, chosen by teachers and other educators throughout the State, identified a number of important reading-related skills. Achievement of the objectives was measured through objective-referenced tests; that is, each objective was measured by one or more items.

This, the first public report of the Statewide Assessment Program, outlines the background of Florida's Assessment and Accountability Programs. In addition, it describes the procedures, results and recommendations of the 1971-72 assessment of selected reading-related skills.

The report has been prepared in two forms: a brief Capsule Report which summarizes the key results and recommendations of the State's performance on the assessment; and a multi-section Technical Report which describes the entire assessment program. The sections of the Technical Report are:

Section 1: Introduction, Procedures, and Program Recommendations

Section 2: Statistical Information

Section 3: Statewide Results and Recommendations

Section 4: District Interpretations

You are reading Section 2 of the Technical Report. The other sections of the Technical Report and the Capsule Report are available upon request from the Evaluation Section, Department of Education, Tallahassee, Florida 32304. When requesting the Technical Report, please indicate which sections you wish to receive. For Section 4, "District Interpretations," the subreport for each district is bound separately, so please identify which district's interpretation you would like.

CHAPTER I

SAMPLING

For 1971-72, the Educational Accountability Act required that results be reported for each district and for the State. For this purpose, testing a sample of students yields accurate estimates of performance and is considerably more economical and efficient than testing every student. Consequently, random sampling techniques were used to select a sample of students from each school in the State.

The sampling procedure chosen for 1971-72 was multiple-matrix sampling. In multiple-matrix sampling, only a portion of the students are tested, and no student takes all the items on the test. Instead, the items are placed on different test forms (in this case, four forms per grade), and each student completes only one form. In this year's assessment, about twenty percent of the students in each grade were tested, with each student taking about one-fourth of the items.

A major advantage of this procedure is that a larger number of objectives can be measured, while minimizing the amount of time any one child spends in the testing situation. Other advantages of multiple-matrix sampling are described on p. 3 of Section 1 and in Appendix A of the Plan for Educational Assessment in Florida. A more complete description of the procedures used in sampling follows.

Item Sampling

The item pool (all items available for use) for each grade was divided into four test forms--A, B, C, and D--with each form given to a different sample of students. All items measuring a single objective were on the same test form. The second grade test forms had 28, 29, 29, and 30 items respectively, while the fourth grade forms consisted of 73, 77, 72, and 69 items respectively. The number of items per form varied slightly, because the forms were designed to take approximately the same amount of administration time, and some items required more time than others. Item sampling and assignment of items to forms were completed by the Center for the Study of Evaluation at UCLA.

Student Sampling

In order to select a sample size which would be proportional among all schools, a special table was constructed for use by school personnel in determining how many students to test. To use the table, school personnel needed to know the total number of students in the grade. The table and accompanying instructions explained how many students to test and how to assign them to forms.[1] The number of students tested in each school is shown in Table A.

Table A. Number of students tested in each school

Column 1 If the number of students in grade 2 (or 4) from each school was between	Column 2 The number of students tested was	Column 3 The number of students taking each form was
0 and 11	None	None
12 and 16	All	3 to 4*
17 and 100	16	4
101 and 150	24	6
151 and 250	40	10
251 and 500	80	20
over 500	100	25

*With 12 students, 3 were tested on each form; with 16, four per form. If the number of students tested was 13, 14, or 15, four students were tested on one or more of the forms and three on the remaining forms.

The numbers in Column 2 are 16% of the larger number in Column 1. The numbers in Column 3 were obtained by dividing the corresponding numbers in Column 2 by 4. The figures in Column 2 were chosen for a number of reasons:

(1) In order for accreditation data to be reliable, a minimum of 12 students had to be tested in each school; thus schools having fewer than 12 students were omitted from testing.

(2) Budget limitations made it prohibitive to test larger numbers than those in Column 2.

[1] See the discussion of sampling procedures on p. 7 in Section 1.

CHAPTER II

TEST RE-SCORING STUDY

A test scoring contract between the Department of Education and Software Programming Associates called for 100% accuracy in scoring. To determine the accuracy of the scoring done by the contractor, 868 test booklets, 429 second grade tests and 439 fourth grade tests, were rescored by Department of Education employees. The booklets contained 44,474 responses, of which 342 were scored incorrectly, for an error rate of 0.77%, or less than one percent. An examination of the error rate per test form showed the rates ranged from 0.40% to 0.97%, indicating that there was not a systematic error factor associated with particular test forms.

However, an analysis of scoring by item showed that certain items were being systematically misscored, and that for one of these items, the error rate was as high as 19.82%. Since the incorrectly scored items were spread across forms, rescoring the items to obtain accurate data would have taken several weeks. To avoid the resultant delay in the release of the final report, it was recommended that items with excessive scoring errors be excluded from the report of results. Items with a scoring error above 9% were excluded, which meant that no scores are being reported for six fourth grade objectives.[1] The six are identified in Table B.

Table B. Fourth grade objectives excluded from the report of results because of excessive scoring error

Objective	Scoring Error
3-16	19.82%
3-46	15.18
3-22	14.28
4-7	13.21
4-2	11.82
4-5	11.82

[1]Other items with high scoring errors had already been excluded from the report of results because of the recommendations of the validation study. (See p. 8 in Section 1 for a discussion of the validation study, and Appendix A for a listing of the omitted objectives).

CHAPTER III

REPORTING STATEWIDE ASSESSMENT DATA

Florida Statewide Assessment is not required to obtain individual student scores, as are other testing programs. Consequently, results are reported in terms of the percentage of students in each district and in the State who achieved each objective. Results are not reported by school or by individual student, but only by district and State. The details of the reporting procedures are given in the following sections.

Percentage of Achievement

Each objective was scored on a pass-fail basis, so a student either did or did not achieve the objective. The percentage of achievement of an objective is the percentage of students who achieved the objective. The percentage of achievement is found by dividing the number of students who achieve the objective by the total number who were tested on the objective and multiplying by 100. For example, assume that 50 students are tested on an objective and 40 of them achieve it. The percentage of achievement of the objective would be:

$$\frac{40}{50} \times 100 = 80\%$$

The weighted percentages of achievement for the district and for the State were obtained in a similar fashion, with the addition of appropriate weighting factors.[1]

Types of Tables Used

Because of the complexity of the results, a variety of tables are used to present the information. For each set of tables, second grade information is given first, and then fourth grade. The objectives for 1971-72 assessment were initially classified into four skill groups and were listed by these skill groups in "1971-72 High Priority Objectives for Reading in Florida, Ages 7 and 9" (Appendix A). The information in the first set of tables is presented in the same sequence as the listing of objectives. The objectives were

---

[1]The formula for calculating weighted percentages of achievement is given in Appendix B.

subsequently reclassified into 11 new categories to facilitate the interpretation of results, and these classifications were used in preparing the sets of tables found in Sections 3 and 4 of the Technical Report.

The set of tables in Appendix C presents the percentage of achievement on each objective for the districts and the State. Each percentage of achievement is reported with its confidence interval (at the 68% level of confidence).[1] These tables are important, since valid comparisons between district and State performance cannot be made without comparing confidence intervals.

The tables in Sections 3 and 4 are organized by the 11 categories of objectives (described in Chapter I of Section 3). They contain the percentages of achievement for each district and the State, rounded off to the nearest whole percent. Where the district and State scores are statistically different (at the 95% level of confidence), the district score is marked with an asterisk.

The tables in Section 4 are designed for use within the district. The tables are arranged alphabetically by county. They list the skill, the objective number, and the percentages of achievement for the State and the district. If the district and State scores overlap at the .95 level of confidence, the reader should refer to the interpretation for that objective in Section 3. An interpretation is given in Section 4 for each objective where district performance differs at the .95 level of confidence from the State score. Asterisks denote the objectives which are interpreted in Section 4.

---

[1] Confidence intervals and levels of confidence are explained in the next chapter.

CHAPTER IV

STANDARD ERROR

Because the percentage of achievement is based on the achievement of a sample of students, rather than the entire population, the obtained percentage of achievement is an estimate of what the population would have achieved if all students had been tested. As an estimate, the score is subject to a certain amount of error. This error, which can be calculated through statistical procedures, is called standard error of a percentage. Standard error indicates by how many percentage points the percentage of achievement of the population might change (be larger or smaller) if all students in the population had been tested. For example, if the obtained percentage were 80% and the standard error were 3%, the true percentage for the population would probably have been somewhere between 77% and 83% at the .68 level of confidence (discussed below), with the 80% representing the best estimate of performance.

The minimum and maximum scores are represented as a range, 77-83%, which is called a confidence interval. Confidence intervals are determined by the standard error. The upper and lower limits (83 and 77) are equidistant from the obtained score (80) and are found by adding or subtracting the standard error (3) from the obtained score.

Since the obtained score and the confidence interval are estimates, the question of the degree of accuracy of the estimates is an important one. A confidence interval based on the obtained score plus-or-minus one standard error has a confidence level of 68% (.68). This means that in 68 cases out of 100, the percentage of achievement for the population would probably fall within the confidence interval, while in 32 cases it would probably be outside these limits.

For purposes of decision-making, we often wish to have more confidence in the accuracy of the estimate. This can be achieved by using a confidence interval based on the obtained score plus-or-minus two standard errors. This interval has a confidence interval of about 95%, which means that there are only 5 chances in 100 that the percentage of achievement for the population would be more or less than the scores within the interval.[1] Thus, if the score is 80, the standard error 3%, and the interval 74-86%, the confidence level is 95%.

---

[1]The .95 confidence level actually equals the obtained score plus-or-minus 1.96 standard errors. For ease in computation, 1.96 is rounded off to 2.0 standard errors.

The following examples, using hypothetical data, help explain the concepts of standard error and confidence intervals.

> Example 1. In district A, 400 students were tested and 300 of them achieved the objective, for a percentage of achievement of 75%.[1] The standard error is 6.5%.

Assume that we wish to establish a confidence interval which includes, at the 68% level of confidence, the percentage of achievement for the population. The confidence interval would be from 75% minus 6.5% to 75% plus 6.5%, or from 68.5% to 83.5%. It can be said with 68% confidence that the population percentage of achievement is somewhere between 68.5% and 83.5%.

If we wish to increase the confidence level to 95%, the size of the interval must be increased to two standard errors on either side of the obtained percentage of achievement. This range would be from 75% minus 13% to 75% plus 13%, or from 62% to 88%.

> Example 2. In district B, 200 students were tested and 150 of them achieved the objective, for a percentage of achievement of 75%. The confidence interval at the 68% level of confidence is from 66-85%, while for the 95% level of confidence it extends from 57% to 93%.

A comparison of the intervals in Examples 1 and 2 shows that the size of the interval increases as the level of confidence is raised from 68% to 95%. It also indicates that the confidence interval increases as the standard error increases.

The size of the standard error is affected by a number of things, such as sample size and the obtained percentage of achievement.[2] Generally, the smaller the number of students tested, the higher the standard error. Thus, if two districts each obtain a score of 80% on an objective, the district which tested 500 students might have a standard error of 2%, while the district which tested 50 students might have a standard error of 10%. In addition, the standard error is affected by the obtained percentage of achievement. Standard errors are higher for scores closest to fifty percent, smaller for scores close to either 0% or 100%. Thus, a district will tend to have larger standard errors for scores close to 50% than for scores close to 0% or 100%.[3]

---

[1]For purposes of the examples, it is assumed that the appropriate weighting factors have been taken into consideration.

[2]The formula used for determining the standard error is given in Appendix B.

[3]This is not always the case, as the standard error for a district or the State is also a function of the combined effects of the weighting factor and percentage of achievement for each school in the district (or district in the State). Thus, it is possible for a score close to 50 to have a smaller error than a score closer to 0 or 100. This subject is explained in detail in Appendix B.

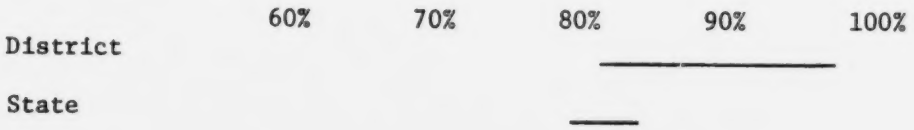
Comparing a District Score with the State Score

In comparing State and district performance on an objective, the question which should be asked is, "Is the district percentage of achievement truly different from the State's percentage of achievement?" To answer the question, confidence intervals--not percentages of achievement--must be compared, since we know that the population's score is likely to be included in the confidence intervals. (Comparisons should always be made at some level of confidence; we recommend the 95% confidence level.) If the two confidence intervals overlap, it cannot be determined if there is a real difference between the two scores, and the probability of a real difference is low. If the intervals do not overlap, then there is some assurance that one did better on the objective than the other. This assurance increases as the confidence level increases.

Suppose, for example, that the State percentage of achievement is 82, while the district percentage is 90. A comparison of percentages of achievement would imply that the district did better than the State. However, this difference cannot be assumed when the respective confidence intervals are examined. The interval for the State at the 95% level of confidence is 80-84%, while the interval for the district is 82-98%. Since the lower end of the district interval lies within the range for State scores, the district performance may not surpass the State performance.

Another way to look at the comparison is to ask if, when comparing confidence intervals, the district and the State could have any percentage in common. In this example, the State percentage of achievement could have been 80, 81, 82, 83, or 84, while the district percentage could have been 82, 83, 84, 85, and so on to 98.[1] Thus, the State and district had 82, 83, and 84 as possible common percentages so no difference in achievement between the district and State can be assumed.

This comparison can be presented visually, through the use of a chart. The chart is marked across in equal units representing percents, or possible scores. The confidence interval for the district (82-98) is marked as a solid line extending from 82 to 98. Below it, the State interval (80-84) is marked as a solid line extending from 80 to 84, as in the example below.



If the two lines overlap, it can be assumed that there is probably not a statistical difference between the percentages of achievement for the district and the State.

---

[1]For the example, the possible percentages are rounded to the nearest whole percent.

APPENDIX A

1971-72 HIGH PRIORITY OBJECTIVES FOR READING IN FLORIDA, AGES 7 AND 9

The established educational objectives for reading (1971-72) consisted of 66 second grade objectives and 169 fourth grade objectives. For a variety of reasons, results of performance are reported only for 43 second grade objectives and 111 fourth grade objectives. The reasons that achievement of these objectives was not measured and/or reported during the 1971-72 assessment are explained below. The basic reasons for omission were: there were no items to measure the objective; in the opinion of the committee which studied the items, the item did not measure the skills identified in the objective; in the opinion of the committee, the items had serious technical difficulties which could prevent the students from answering the item correctly; or the item was consistently misscored. A brief description of each reason for omission is given, along with the symbol used to indicate the omission in the listing of objectives on the following pages.

No Items

Since the test was objective-referenced, scores could be reported only for those objectives which were measured by test items. No items were submitted for 12 second grade objectives and 27 fourth grade objectives. Omissions caused by lack of test items are identified with an "*a*" beside the objective.

Invalid Items

As described on p. 8 of Section 1, a committee met to validate the reading items used in this year's assessment. After studying the items, the committee concluded that in some cases the items did not measure the skills identified in their (intended) corresponding objectives. Consequently, they recommended that the results of 4 second grade and 13 fourth grade objectives be omitted from the report. "*b*" marks objectives omitted because items did not measure the objectives.

Technical Difficulties with Items

The committee also concluded that some of the items had serious technical difficulties which might prevent students from answering the questions accurately. Among the problems they identified were (1) the instructions for the items were inadequate, so that students could not be sure of what they were to do; (2) the pictures which formed the answers were confusing, poorly drawn, or had other problems; and (3) some items had more than one correct answer. There were also other technical difficulties specific to a particular item. A total of 7 second grade and 12 fourth grade objectives were not reported because of technical difficulties. The technical difficulties are identified as "*c*," inadequate instructions; "*d*," inadequate pictures; "*e*," more than one correct answer; and "*f*," other technical difficulties.

Scoring Error

As reported in the chapter on test rescoring (p. 3, Section 2), some items were systematically misscored. The six fourth grade objectives omitted for this reason are identified by "*g*".

Reading Objectives for Age 7--Grade 2

Group 1

1. Given an oral direction, the learner will follow it.
2. Given the name of a body part, the learner will locate it on himself, another person, a doll, or a picture.
3. Given a set of items or pictures, the learner will identify those that are identical.
4. The learner will match items to illustrations of them.
5. Given a word or phrase orally, the learner will select from among several pictures the one that represents the word or phrase.

b 6. The learner will identify numerals.

7. Shown part of an item, or a picture of part of an item, the learner will identify the item.
8. After hearing descriptive words, phrases, or sentences, the learner will select from a series of pictures the event or object that was described.
9. Given two simple sentences which are identical except for one word, the learner will identify the different word.
10. The learner will identify pairs of words that rhyme and pairs of words that do not rhyme.
11. The learner will identify figures that are identical, though one is rotated.

c 12. The learner will identify right and left body parts.

a 13. Given orally the function of a familiar object, the learner will identify that object.

14. After listening to a selection, the learner will name its main characters.
15. Given a set of upper- or lower-case letters, the learner will identify the letters that are named.
16. Given an upper- or lower-case letter, the learner will identify its corresponding lower- or upper-case form.
17. After listening to a story, the learner will identify the main events in the proper order.

b 18. The learner will identify words, pictures, or objects representing similar concepts.

19. After listening to a selection, the learner will identify its main ideas.
20. The learner will identify words written in manuscript that begin with a designated letter.

a 21. The learner will identify pairs of words beginning with the same consonant sound and those beginning with different consonant sounds.

a 22. After hearing a story, poem or passage in which an emotion is depicted, the learner will describe the emotion.

23. The learner will identify from among several items those that belong to a given class or set.
24. The learner will identify from among several items those that do not belong to a given class or set.

d 25. The learner will identify words, pictures, or objects representing opposite concepts.

26. The learner will identify from given words or pictures those having the same beginning consonant sound.

c 27. Given words or pictures of objects, all but one ending with the same consonant sound, the learner will identify the one having a different final sound.

28. The learner will identify pairs of words ending with the same consonant sound and those ending with different consonant sounds.

29. Given a rhyming couplet with an incomplete last line and a group of words or pictures of objects, the learner will select the words which best complete the rhyme.

30. The learner will identify pairs of words containing the same medial consonant sound and those containing different medial consonant sounds.

d 31. The learner will identify from given words or pictures of objects those having the same medial consonant sound.

32. The learner will classify several items into groups according to his own or a given rationale.

a 33. The learner will identify from a set of words those containing a given consonant sound in a specified position.

34. The learner will differentiate between phrases and complete sentences.

Group 2

1. The learner will identify vowels in the alphabet or in words.

a 2. The learner will identify consonants in the alphabet or in words.

3. Given known words or phrases, the learner will locate them in a given reading selection.

4. Given a written consonant and several pictures of objects, the learner will identify the object whose name begins with the given consonant.

5. The learner will identify from a set of written words those beginning with the same single consonant sound as a given word.

6. Given a new written word that is in his listening and speaking vocabulary the learner will identify an illustration or object related to that word.

7. Given a written consonant and several pictures of objects, the learner will identify the object whose name ends with the given consonant.

8. The learner will identify from a set of written words those ending with the same single consonant sound as a given word.

9. The learner will identify the simple words making up a compound word.

10. Given illustrations and sets of descriptive written words, phrases or sentences, the learner will select the word, phrase, or sentence which best describes each illustration.

11. The learner will identify from a set of written words those containing the same single medial consonant sound as a given word.

b 12. Given a word orally, or a picture of an object, the learner will identify its medial single consonant.

d 13. Given a written consonant and several pictures of objects, the learner will identify the object whose name contains the given consonant in the medial position.

f 14. Given an oral word and a written consonant (single, blend, or digraph) from that word, the learner will identify whether the consonant is in the initial, medial, or final position.

a 15. Given words with similar denotation, the learner will identify the differences in connotation or nuance.

a 16. The learner will choose from a list of words with similar meanings but with different connotations or nuances the correct word to complete a given sentence.

Group 3

1. The learner will identify the beginning of each sentence in a given passage.
2. The learner will identify the ending of each sentence in a given passage.
3. After reading a selection, the learner will answer specific questions or find detailed information.
4. Given class members, the learner will identify additional members in the same class.

f 5. The learner will identify related words or statements.

a 6. Given a fantasy, the learner will identify events that could not happen in real life.

7. Given a passage in which an emotion is conveyed, the learner will identify the emotion described in the passage.
8. Given class members (words or statements), the learner will identify class concepts.
9. Given class concepts, the learner will identify members belonging to each class.

a 10. The learner will arrange a scrambled set of words or sentences in logical order.

a 11. Given an incomplete sentence, the learner will complete it by identifying a word or phrase suitable to the context of the sentence.

b 12. Given class members, the learner will identify classes to which they belong.

a 13. The learner will classify data according to an identifiable rationale or system.

14. The learner will answer questions about a given hypothetical situation which require him to infer information not literally or directly stated in the situation as given.

Group 4

1. The learner will arrange given words in alphabetical order.

a 2. The learner will correctly follow written instructions for tasks.

Reading Objectives for Age 9--Grade 4

Group 1

1. Given an oral direction, the learner will follow it.
2. Given the name of a body part, the learner will locate it on himself, another person, a doll, or a picture.
3. Given a set of items or pictures, the learner will identify those that are identical.

b 4. The learner will match items to illustrations of them.

5. Given a word or phrase orally, the learner will select from among several pictures the one that represents the word or phrase.

a 6. After hearing descriptive words, phrases, or sentences, the learner will select from a series of pictures the event or object that was described.

7. Given the name of a part of the body, the learner will identify its function.

f 8. The learner will identify right and left body parts.

9. Given complete and incomplete items or pictures, the learner will supply the missing part to make the items or pictures identical.

b 10. After listening to a selection, the learner will name its main characters.

11. After listening to a story, the learner will identify the main events in the proper order.

b 12. After listening to a selection, the learner will identify its main ideas.

13. Given orally the function of a familiar object, the learner will identify that object.

14. Given two simple sentences which are identical except for one word, the learner will identify the different word.

15. The learner will identify figures that are identical, though one is rotated.

16. Given a set of upper- or lower-case letters, the learner will identify the letters that are named.

17. Given an upper- or lower-case letter, the learner will identify its corresponding lower- or upper-case form.

18. The learner will identify words written in manuscript that begin with a designated letter.

19. The learner will identify the direction or position of a specified object.

20. The learner will identify from given words or pictures those having the same beginning consonant sound.

21. The learner will identify pairs of words beginning with the same consonant sound and those beginning with different consonant sounds.

22. The learner will identify pairs of words ending with the same consonant sound and those ending with different consonant sounds.

23. The learner will identify pairs of words that rhyme and pairs of words that do not rhyme.

24. Given a set of words, the learner will identify those that rhyme.

25. The learner will identify the letters that immediately follow and precede a given letter in the alphabet.

b 26. Given a lower- or upper-case letter in cursive, the learner will identify its corresponding upper- or lower-case form.

b 27. Given a set of upper- or lower-case letters in cursive, the learner will identify the letter that is named.

28. The learner will identify the cursive form of a given manuscript letter or manuscript form of a given cursive letter.

29. The learner will identify words written in cursive that begin with a designated letter.

30. The learner will identify from among several items those that belong to a given class or set.

a 31. The learner will identify from among several items those that do not belong to a given class or set.

32. The learner will identify words, pictures, or objects representing similar concepts.

33. The learner will identify words, pictures, or objects representing opposite concepts.

f 34. The learner will classify several items into groups according to his own or a given rationale.

35. The learner will identify pairs of words containing the same medial consonant sound and those containing different medial consonant sounds.

36. Given words or pictures of objects, all but one ending with the same consonant sound, the learner will identify the one having a different final sound.

b 37. The learner will identify from given words or pictures of objects those having the same medial consonant sound.

38. The learner will identify from a set of words those containing a given consonant sound in a specified position.

e 39. The learner will identify, from given words or pictures of objects, those having the same vowel sound.

40. Given words or pictures of objects, all but one containing the same vowel sound, the learner will identify the one having a different vowel sound.

41. Given a word orally, the learner will specify the number of syllables it contains.

42. After hearing a story, poem or passage in which an emotion is depicted, the learner will describe the emotion.

43. Shown part of an item, or a picture of part of an item, the learner will identify the item.

44. Given a rhyming couplet with an incomplete last line and a group of words or pictures of objects, the learner will select the words which best complete the rhyme.

a 45. Given a selection without an ending, the learner will identify an appropriate ending.

46. The learner will differentiate between phrases and complete sentences.

ef 47. Given two simple sentences, the learner will make a compound sentence by adding a coordinator.

48. The learner will change a sentence by substituting two or more of its words with two or more other words of the same grammatical function.

f 49. The learner will substitute one word for another of the same syntactical function in a given simple sentence.

a 50. The learner will complete or construct sentences using a given verb form.

51. The learner will construct complete sentences using past, present, and future forms.

Group 2

1. The learner will identify consonants in the alphabet or in words.
b 2. The learner will identify vowels in the alphabet or in words.
a 3. Given a new written word that is in his listening and speaking vocabulary the learner will identify an illustration or object related to that word.
4. Given a written consonant and several pictures of objects, the learner will identify the object whose name begins with the given consonant.
5. The learner will identify from a set of written words those beginning with the same single consonant sound as a given word.
6. Given a written consonant and several pictures of objects, the learner will identify the object whose name ends with the given consonant.
7. The learner will identify from a set of written words those ending with the same single consonant sound as a given word.
b 8. Given a word orally, or a picture of an object, the learner will identify its medial single consonant.
9. The learner will identify from a set of written words those containing the same single medial consonant sound as a given word.
b 10. Given a written consonant and several pictures of objects, the learner will identify the object whose name contains the given consonant in the medial position.
11. Given a word orally with a beginning consonant blend, the learner will identify from a list of written words those with the same beginning consonant blend as the given word.
12. Given an oral word containing a short vowel sound, the learner will identify from a list of written words those containing the same short vowel sound as the given word.
13. Given an oral word containing a long vowel sound, the learner will identify from among given written words those containing the same long vowel sound as the given word.
14. From a list of written words, the learner will identify those that have the same short vowel sound.
15. The learner will identify from given written words those containing short vowel sounds.
16. From a list of written words, the learner will identify those that have the same long vowel sound.
17. The learner will identify from words given orally or from pictures of objects those that begin with a given written consonant blend.
18. Given a word orally with a final consonant blend, the learner will identify from a list of written words those with the same final consonant blend as the given word.
19. The learner will identify the simple words making up a compound word.
20. Given known words or phrases, the learner will locate them in a given reading selection.
21. Given a known word, the learner will identify its definition.
22. The learner will identify from given written words those containing long vowel sounds.
23. Given pairs of written words, the learner will identify those containing the same diphthong sound and those containing different diphthong sounds.
24. Given a written consonant digraph and several pictures of objects, the learner will identify the object whose name begins with the given digraph.

25. Given a written consonant digraph and several pictures of objects, the learner will identify the object whose name ends with the given digraph.
26. Given a written consonant digraph and several pictures of objects, the learner will identify the object whose name contains the given digraphs in the medial position.
27. Given an unknown compound word composed of familiar simple words, the learner will identify the meaning of the compound.
28. Given words in random order that may be combined into compound words, the learner will form compound words.
29. Given a sentence containing one word of a compound word, the learner will use the context of the sentence to identify the missing part.
30. Given illustrations and sets of descriptive written words, phrases or sentences, the learner will select the word, phrase, or sentence which best describes each illustration.
31. Given a written word ending with a consonant blend, the learner will substitute other final consonant blends to create new words.
32. Given an oral word and a written consonant (single, blend, or digraph) from that word, the learner will identify whether the consonant is in the initial, medial, or final position.
33. The learner will complete given written words by adding the missing single vowel, vowel digraph, or diphthong.
34. The learner will identify designated types of vowels in given written and oral words.
35. The learner will divide given words into syllables.
f 36. The learner will identify the primary and secondary accented syllables and the unaccented syllables of given words.
37. Given an unfamiliar word in context, the learner will use context clues to identify the meaning of the word.
38. Given an incomplete sentence, the learner will complete it by identifying a word or phrase suitable to the context of the sentence.
a 39. Given words with similar denotation, the learner will identify the differences in connotation or nuance.
a 40. The learner will choose from a list of words with similar meanings but with different connotations or nuances the correct word to complete a given sentence.

Group 3

1. The learner will identify the beginning of each sentence in a given passage.
2. The learner will identify the ending of each sentence in a given passage.
3. The learner will identify the meaning of punctuation marks and capital letters.
b 4. After reading a selection, the learner will answer specific questions or find detailed information.
a 5. The learner will read a selection carefully to find specified information to answer specific questions.
6. Given a written contraction, the learner will identify the two words that form it.
f 7. The learner will identify the letter(s) that the apostrophe represents in given contractions.

8. Given an abbreviation, the learner will identify the word for which it stands.
b 9. Given several sentences, the learner will indicate which sentences are opposite in meaning.
10. The learner will identify from a list of events or ideas those contained in a previously read selection.
11. Given a list of items or events from a familiar reading selection, the learner will sequence them in the order of their occurrence in the selection.
f 12. Given a reading selection, the learner will identify key words, phrases or passages important to the meaning of the selection.
13. After reading a given selection, the learner will identify its main events in proper sequence.
14. The learner will identify the main ideas and major concepts of a selection.
15. The learner will answer from memory questions about the main idea, important facts, and general content of a selection he has read.
g 16. The learner will paraphrase from memory a selection he has read.
a 17. The learner will locate in a given reading selection the sentence or paragraph containing its main idea.
18. The learner will identify synonyms in given pairs of words, lists of words, or reading selections.
19. The learner will identify antonyms in given pairs of words, lists of words, or reading selections.
20. Given two or more sentences, each using the same multiple-meaning word in a different context, the learner will identify each different meaning of the word.
21. The learner will identify the root, prefix, or suffix of a given written word.
g 22. The learner will add a prefix or suffix to a given root word, making appropriate spelling changes in the root when necessary.
23. The learner will identify prefixed or suffixed words that mean the same as given phrases.
24. The learner will identify homonyms in given pairs of words, lists of words, or reading selections.
f 25. Given a fantasy, the learner will identify events that could not happen in real life.
f 26. Given sentences, the learner will identify those that are realistic and those that are make believe.
27. Given a passage in which an emotion is conveyed, the learner will identify the emotion described in the passage.
28. Given a passage in which an emotion is conveyed, the learner will identify the words or phrases conveying emotion.
29. The learner will identify related words or statements.
30. The learner will identify specified figures of speech in reading selections.
31. Given an incomplete passage, the learner will select or write a sentence to complete it.
b 32. The learner will identify correctly and incorrectly used possessives in given phrases or sentences.
a 33. The learner will identify the feeling or mood conveyed by a given selection.

f 34. Given a new word and the meaning of its prefix, suffix, and/or root, the learner will identify the meaning of the new word.

35. Given class members, the learner will identify additional members in the same class.

36. Given class members (words or statements), the learner will identify class concepts.

37. Given class concepts, the learner will identify members belonging to each class.

a 38. Given class members, the learner will identify classes to which they belong.

a 39. The learner will classify data according to an identifiable rationale or system.

40. Given a passage and a paraphrase of a statement appearing in that passage, the learner will locate the original statement in the passage.

f 41. The learner will identify examples of literal and non-literal phrases or sentences in given selections.

42. The learner will translate given examples of non-literal language.

43. The learner will arrange a scrambled set of words or sentences in logical order.

44. Given a scrambled set of sentences which make up a paragraph or passage, the learner will arrange them in logical order.

a 45. The learner will describe how he would feel or what he would do if he were a designated character in a reading selection.

g 46. Given a statement or passage involving cause and effect, the learner will identify the cause and the effect.

47. The learner will answer questions about a given hypothetical situation which require him to infer information not literally or directly stated in the situation as given.

a 48. Given a reading selection, the learner will identify the author's purpose.

49. The learner will identify correct and incorrect uses of inflected verb forms in given phrases or sentences.

b 50. The learner will identify correct and incorrect uses of comparatives and superlatives in given written phrases and sentences.

a 51. The learner will give his opinion concerning a current event or issue about which he has read.

a 52. Given a reading selection, the learner will state whether it is relatively biased or unbiased.

53. The learner will identify the missing element in a given analogy.

a 54. Given a selection containing facts and conclusions drawn from those facts, the learner will explain whether or not the facts warrant the conclusions.

a 55. The learner will identify in a given article or editorial the author's opinions and one or more reasons or statements on which each opinion is based.

a 56. After reading a given non-fiction selection, the learner will discuss how well the author substantiated his opinions with facts and references.

Group 4

1. The learner will arrange given words in alphabetical order.
g 2. The learner will correctly follow written instructions for tasks.
3. The learner will identify the information a title page contains.
a 4. Given a list of words beginning with the same letter or letters, the learner will arrange the words in alphabetical order.
g 5. The learner will correctly follow instructions to fill out forms and applications.
a 6. The learner will explain the meaning and the use of map symbols, colors, keys, and other devices used in map reading.
g 7. The learner will use the symbols, colors, or keys of a map to answer specific questions.
8. Given a map and a location, the learner will find the location on the map.
9. The learner will identify the uses of bold-face type.
10. The learner will identify the uses of italics.
a 11. The learner will use the table of contents of a book to locate specific information or answer specific questions.
12. Given a library catalogue card, the learner will identify the author, title, subject, and call number of the book.
13. Given a problem or question, the learner will identify the key word(s) he would look up in an index to find information related to the problem.
a 14. The learner will use the index to answer questions or locate desired information.
a 15. Given a reading assignment and its major topics, the learner will write the appropriate subtopics under each.
16. Given a list of questions and a list of specialized reference materials, the learner will identify the reference which would provide the answer to each question.
a 17. The learner will use the table of abbreviations of a textbook or reference book to identify the words for which designated abbreviations stand.
18. Given a topic or problem, the learner will identify one or more appropriate sources of information on that topic or problem.
19. The learner will skim a given reading selection to locate specific information. (timed)
a 20. The learner will identify information which is essential and information which is unnecessary to the solution of a given word problem.
21. The learner will indicate appropriate reading rates and methods for designated materials and purposes for reading them.
a 22. The learner will write a brief plot summary of a given literary work.

APPENDIX B

STATISTICAL FORMULAS

Formula for Weighted District Percentage of Achievement

The formula for obtaining a proportion of students achieving an objective in a district is

$$d = \sum_i N_i p_i / N \qquad (1)$$

= sum over all schools (weighting factor x proportion of achievement)

where:

d = district proportion of achievement of an objective

N_i = number of grade 2 (or 4) students in school # i

N = number of grade 2 (or 4) students in a district

p_i = proportion of grade 2 (or 4) students achieving the objective in school # i

$\sum_i$ = sum over all schools in the district

The district percentage of achievement is 100 times the district proportion of achievement. The state percentage of achievement is obtained by substituting district information for the school information in equation (1).

The weighting factor, defined by the term N_i/N in equation (1), varies from one school to another, but is constant for a school. In calculating the percentage of achievement for a district, the only variable is the school proportion of achievement.

Example 1

Consider a district with five schools. Suppose there are 200 second graders (N = 200) in the district. The breakdown of population of students and proportion of achievement is tabulated below.

School # i	Population of second graders N_i	weighting factor for school i N_i/N	Proportion of achievement p_i
1	20	0.100	0.8
2	25	0.150	.7
3	30	0.150	.6
4	75	0.375	.3
5	50	0.250	.5

The district proportion of achievement of objective, using equation (1), is

$$d = .1 \times .8 + .125 \times .7 + .15 \times .6 + .375 \times .3 + .250 \times .5$$

$$= .08 + .0875 + .09 + .1125 + .125$$

$$= .495$$

Example 2

Consider the same population and weighting data, as in example 1, with a different proportion of achievement for each school:

School # i	Proportion of Achievement P_i
1	0.6
2	.6
3	.4
4	.4
5	.6

The district proportion of achievement for this example is

$$d = .1 \times .6 + .125 \times .6 + .15 \times .4 + .375 \times .4 + .250 \times .6$$

$$= .495$$

The above examples indicate that although the school proportions of achievement are changed, the district proportion of achievement remains the same. It will be demonstrated later in this appendix that while the percentages of achievement for examples 1 and 2 are the same, the standard errors are different.

Formula for Standard Error

The formula for obtaining an estimate of the standard error of a proportion of students achieving an objective in a school is

$$\hat{\sigma} = \left[\frac{p(1-p)}{(n-1)} \right]^{1/2} \qquad (2)$$

where:

p = proportion of students achieving the objective

n = # of students in the school tested on the objective

When the number of grade 2 (or 4) students in the school (the population) drops to 40 students or fewer, the formula (2) must be multiplied by a finite correction factor in order to reduce the error estimates. The modified formula is

$$\hat{\sigma} = \left[\frac{p(1-p)(N-n)}{(N-1)(n-1)}\right]^{1/2} \qquad (3)$$

where:

N = population of grade 2 (or 4) students in the school and p and n are the same as in formula (2).

Since results are reported by <u>district</u> percentage of achievement, not by school, it is necessary to obtain an estimate of the standard error of the district proportion of students achieving an objective. The standard error for a district is calculated by summing over all schools in the district the standard error of each school's proportion of achievement. When samples are disproportionate from each school in the district, the formula used to calculate the standard error of the district proportion of achievement is

$$\hat{\sigma} = \left[\sum_i \frac{N_i(N_i-n_i)}{N^2} \times \frac{p_i(1-p_i)}{(n_i-1)}\right]^{1/2} \qquad (4)$$

sum over all schools (correction factor x standard error for each school)

where:

n_i = # of students tested on the objective in school # i

and N_i, N and p are the same as in formula (1).

Although formula (4) seems rather complicated, it is relatively simple. Basically, it is the same formula as equation (2) for computing the standard error of a school's proportion of achievement (with subscript i to identify each school) and an appropriate finite population correction factor for the school.

In order to help explain the use of formula (4), consider the same data as in examples 1 and 2. Suppose that the number of students tested on the objective in each school i is 4, i.e. $n_i = 4$.

The standard error, using formula (4) and the data from example 1, is

$$\hat{\sigma} = (.008 \times .0533 + .0131 \times .07 + .0195 \times .08 \times .1331 \times .07 + .0575 \times .0833)^{\frac{1}{2}}$$

$$= (.0004 + .0009 + .0015 + .0093 + .0048)^{\frac{1}{2}}$$

$$= (.0169)^{\frac{1}{2}}$$

$$= .13$$

The standard error, using formula (4) and the data from example 2, is

$$\hat{\sigma} = (.008 \times .08 + .0131 \times .08 + .0195 \times .08 + .1331 \times .08 + .0575 \times .08)^{\frac{1}{2}}$$

$$= (.0006 + .0011 + .0015 + .0106 + .0046)^{\frac{1}{2}}$$

$$= (.0184)^{\frac{1}{2}}$$

$$= .1356$$

The above examples indicate that it is possible for a district to have the same percentage of achievement (49.50%) on two objectives, but different standard errors (13% and 13.56%).

APPENDIX C

TABLES SHOWING 68% CONFIDENCE INTERVALS FOR EACH OBJECTIVE FOR THE DISTRICTS AND THE STATE

The tables reporting the confidence intervals (using the 68% level of confidence) are in Appendix C. They are arranged alphabetically by district, with one page for second grade scores, and one for fourth grade scores. The tables for the State ranges are at the end. The objectives are arranged in four groups, which correspond to the listing of objectives in Appendix A. Objectives are numbered across the page, with the ranges for five objectives given on a line. The table is set up similar to Table C.

Table C. X County, Grade 2, 68% Confidence Intervals for District Achievement of Each Objective

OBJ NO	PER CENT WHO ACHIEVE	*--RANGE OF--* STUDENTS ACHIEVING MIN	MAX	OBJ NO	PER CENT WHO ACHIEVE	*--RANGE OF--* STUDENTS ACHIEVING MIN	MAX
GROUP 1							
01	84.09	80.36	87.82	02	78.64	74.23	83.05
06	96.65	94.76	99.97	07			
11	67.57	62.86	72.28	12	91.36	88.77	93.95
GROUP 2							
01	89.89	87.24	92.54	02	100.00	100.00	100.00

The group number is found at the left margin, while the objective number, corresponding to an objective in Appendix A, is given under the column headed "OBJ NO."[1] The second column, "PER CENT WHO ACHIEVE," reports the obtained percentage of achievement. The next two columns, under "RANGE OF STUDENTS ACHIEVING MIN--MAX," are the lower and upper end points for the confidence interval at the 68% level of confidence.

The standard error is not given, but it can be derived by subtracting the score under "MIN" from the obtained percentage of achievement; that is, subtract the second percentage from the first percentage.[2]

---

[1] In Appendix A and the tables in Sections 3 and 4, the group and objective numbers are combined to identify the objective, with the group number first (i.e., 1-1, 1-2, 1-3, 1-4, 1-5, 2-1, 2-2).

[2] Of course, the same number (standard error) could be obtained by subtracting the percentage of achievement from the "MAX" percentage in column 3.

To change the confidence interval from the 68% level of confidence to the 95% level of confidence:

1. Determine the standard error for the objective.

2. Double the standard error.

3. Subtract the doubled standard error from the percentage of achievement to determine the lower end of the interval.

4. Add the doubled standard error to the percentage of achievement to determine the upper end of the interval.

For example, to change the interval for objective 1-1 in Table C to the 95% level of confidence:

1. Subtract 80.36 from 84.09 to find the standard error, which is 3.73.

2. Double the standard error (two standard errors = 7.46).

3. Subtract two standard errors from the percentage of achievement (84.09 - 7.46 = 76.63%, the lower end of the interval).

4. Add two standard errors to the percentage of achievement (84.09 + 7.46 = 91.55%, the upper end of the interval).

Thus, the interval at the .95 level of confidence for objective 1-1 is 76.63% to 91.55%, with 84.09% representing the best estimate of how the population would have scored.

As a second example, consider the range for objective 1-6. The standard error is 1.89 and two standard errors are 3.78. The .95 confidence interval is 96.65 ± 3.73, or 92.87% to 100%, since the percentage of achievement cannot exceed 100%.

We mentioned earlier that the standard error decreases as the percentage of achievement approaches 0% or 100%. When the score is 0% or 100%, there is no standard error or range, as objective 2-2 in Table C illustrates.

The tables begin on the next page, so that the two tables for each district can be placed facing each other.

TABLE 1. ALACHUA COUNTY, GRADE 2, 68% CONFIDENCE INTERVALS FOR DISTRICT ACHIEVEMENT OF EACH OBJECTIVE.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.

[1]The objective number, corresponding to an objective in Appendix A, is given under the column headed OBJ NO. The second column, PER CENT WHO ACHIEVE, reports the obtained percentage of achievement. The next two columns, under RANGE OF STUDENTS ACHIEVING MIN--MAX, are the lower and upper end points for the confidence interval at the 68% level of confidence. The standard error is not given, but it can be derived by subtracting the score under MIN from the obtained percentage of achievement.

[2]A complete discussion of standard error and confidence intervals is found at the beginning of Chapter IV.

[3]A list of the objectives is included as Appendix A. Appendix A also describes the reasons that scores are not given for all objectives.
